Application No.: 10/621658

Case No.: 58204US002

**Amendments to the Claims:**

The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (Original) An adhesive article comprising:
  - (a) a release liner having a surface with an arrangement of structures thereon, wherein the structures extend downward from a plane of the surface, and wherein the structures have at least three sidewalls, wherein a first sidewall makes an angle with respect to the plane of the surface of greater than about  $0^{\circ}$  and less than  $90^{\circ}$  and a second sidewall makes an angle with respect to the plane of the surface of greater than  $0^{\circ}$  and less than about  $90^{\circ}$ , wherein the first sidewall angle differs from the second sidewall angle by more than about  $10^{\circ}$ ; and
  - (b) an adhesive layer on the surface of the release liner.
2. (Original) The adhesive article of claim 1, wherein the first sidewall angle differs from the second sidewall angle by more than about  $20^{\circ}$ .
3. (Original) The adhesive article of claim 1, wherein the first sidewall angle differs from the second sidewall angle by more than about  $30^{\circ}$ .
4. (Original) The adhesive article of claim 1, wherein the second sidewall makes an angle with respect to the plane of the surface of greater than about  $45^{\circ}$  and less than about  $85^{\circ}$ .
5. (Original) The adhesive article of claim 1, wherein the second sidewall makes an angle with respect to the plane of the surface of greater than about  $50^{\circ}$  and less than about  $70^{\circ}$ .
6. (Original) The adhesive article of claim 1, wherein the second sidewall makes an angle with respect to the plane of the surface of greater than about  $45^{\circ}$  and less than about  $85^{\circ}$ , and wherein the first sidewall makes an angle with respect to the plane of the surface of less than about  $50^{\circ}$ .

Application No.: 10/621658

Case No.: 58204US002

7. (Original) The adhesive article of claim 6, wherein the first sidewall makes an angle with respect to the plane of the surface of less than about 35°.
8. (Original) The adhesive article of claim 1, wherein the structures have a pitch of less than about 2500 micrometers.
9. (Original) The adhesive article of claim 1, wherein the structures have a pitch of less than about 350 micrometers.
10. (Original) The adhesive article of claim 1, wherein the structures form a substantially continuous and substantially regular pattern on the surface.
11. (Original) The adhesive article of claim 1, further comprising a third sidewall, wherein the first sidewall and the third sidewall make an angle with respect to the plane of the surface of less than about 50°.
12. (Original) The adhesive article of claim 11, wherein the first and third sidewall angles are substantially equal.
13. (Original) The adhesive article of claim 1, further comprising a third sidewall and a fourth sidewall, wherein the first sidewall and the third sidewall make an angle with respect to the plane of the surface of less than about 35°, wherein the first sidewall angle and the third sidewall angle are substantially equal, and wherein the second sidewall and the fourth sidewall make an angle with respect to the plane of the surface of greater than about 45° and less than about 90°, wherein the second sidewall and the fourth sidewall angles are substantially equal.
14. (Original) The adhesive article of claim 1, wherein the structures comprise at least four sidewalls, wherein three sidewalls make an angle with respect to the plane of the surface of less than about 50°.

Application No.: 10/621658

Case No.: 58204US002

15. (Original) The adhesive article of claim 14, wherein the three sidewall angles are substantially equal.

16. (Original) The adhesive article of claim 14, wherein the three sidewalls make an angle with respect to the plane of the surface of less than about  $35^\circ$ , wherein the three sidewall angles are substantially equal, and wherein one sidewall makes an angle with respect to the plane of the surface of greater than about  $45^\circ$  and less than about  $90^\circ$ .

17. (Withdrawn) An adhesive article comprising an adhesive layer having a surface with an arrangement of structures thereon, wherein the structures extend upward from a plane of the surface, and wherein the structures have at least three sidewalls, wherein a first sidewall makes an angle with respect to the plane of the surface of greater than about  $0^\circ$  and less than  $90^\circ$  and a second sidewall makes an angle with respect to the plane of the surface of greater than  $0^\circ$  and less than about  $90^\circ$ , wherein the first sidewall angle differs from the second sidewall angle by more than about  $10^\circ$ .

18. (Withdrawn) The adhesive article of claim 17, wherein the first sidewall angle differs from the second sidewall angle by more than about  $20^\circ$ .

19. (Withdrawn) The adhesive article of claim 17, wherein the first sidewall angle differs from the second sidewall angle by more than about  $30^\circ$ .

20. (Withdrawn) The adhesive article of claim 17, wherein the second sidewall makes an angle with respect to the plane of the surface of greater than about  $45^\circ$  and less than to about  $85^\circ$ .

21. (Withdrawn) The adhesive article of claim 17, wherein the second sidewall makes an angle with respect to the plane of the surface of greater than about  $50^\circ$  and less than to about  $70^\circ$ .

Application No.: 10/621658

Case No.: 58204US002

22. (Withdrawn) The adhesive article of claim 17, wherein the second sidewall makes an angle with respect to the plane of the surface of greater than about 45° and less than about 85°, and wherein the first sidewall makes an angle with respect to the plane of the surface of less than about 50°.

23. (Withdrawn) The adhesive article of claim 17, wherein the first sidewall makes an angle with respect to the plane of the surface of less than about 35°.

24. (Withdrawn) The adhesive article of claim 17, wherein the structures have a pitch of less than about 2500 micrometers.

25. (Withdrawn) The adhesive article of claim 17, wherein the structures have a pitch of less than about 350 micrometers.

26. (Withdrawn) The adhesive article of claim 17, wherein the structures form a substantially continuous and substantially regular pattern.

27. (Withdrawn) The adhesive article of claim 17, wherein the structures have a substantially trapezoidal cross-sectional shape with a substantially flat top.

28. (Withdrawn) The adhesive article of claim 17, wherein the tops of the structures comprise a ridge that is substantially parallel to the plane of the surface.

29. (Original) A release liner having a surface with an arrangement of structures thereon, wherein the structures extend downward from a plane of the surface, and wherein the structures have at least three sidewalls, wherein a first sidewall makes an angle with respect to the plane of the surface of greater than about 0° and less than 90° and a second sidewall makes an angle with respect to the plane of the surface of greater than 0° and less than about 90°, wherein the first sidewall angle differs from the second sidewall angle by more than about 10°.

Application No.: 10/621658

Case No.: 58204US002

30. (Withdrawn) A method for increasing coating speed, comprising applying an adhesive to a release liner having a surface with an arrangement of structures thereon, wherein the structures extend downward from a plane of the surface, and wherein the structures have at least three sidewalls, wherein at least one of a first sidewall and a third sidewall makes an angle with respect to the plane of the surface of less than about  $45^\circ$ , and wherein a second sidewall makes an angle with respect to the plane of the surface of greater than about  $45^\circ$  and less than  $85^\circ$ , wherein the second sidewall angle differs from the first sidewall angle or the third sidewall angle by more than about  $20^\circ$ , and wherein the first and third sidewalls are proximal to a leading edge of the adhesive.

31. (Withdrawn) The method of claim 30, wherein a lateral edge between the first and third sidewalls is oriented substantially perpendicular to the leading edge of the adhesive.

32. (Withdrawn) A method of transferring a graphic article comprising:

- (a) providing a graphic article including a film with a first surface and a second surface, wherein an image occupies at least a portion of the first surface, an adhesive layer on the second surface of the film, and a release liner on the adhesive layer, wherein the release liner has a surface with an arrangement of structures thereon, wherein the structures extend downward from a plane of the surface, and wherein the structures have at least three sidewalls, wherein a first sidewall makes an angle with respect to the plane of the surface of greater than about  $0^\circ$  and less than  $90^\circ$  and a second sidewall makes an angle with respect to the plane of the surface of greater than  $0^\circ$  and less than about  $90^\circ$ , wherein the first sidewall angle differs from the second sidewall angle by more than about  $10^\circ$ ;
- (b) removing the film and the adhesive layer under portions of the first surface not occupied by the image such that at least a portion of the surface of the release liner is exposed;
- (c) attaching a handling tape to the image and the exposed portion of the release liner;
- and

Application No.: 10/621658

Case No.: 58204US002

(d) transferring the article into registration with a substrate.

33. (Withdrawn) The method of claim 32, wherein the handling tape is selected from a pre-mask tape, a pre-space tape, and a splicing tape.

34. (Currently Amended) A release liner with a surface comprising an arrangement of pyramidal depressions thereon having a pitch of less than about 350 micrometers, wherein the depressions are capable of adhering to a handling tape at an adhesion value of greater than about 2 N/dm after 5 days at 50°C, as measured by a Prespace Tape Adhesion Test, wherein the pyramidal depressions have a first sidewall that makes an angle with respect to the plane of the surface of about 50° or less and a second sidewall makes an angle with respect to the plane of the surface of greater than about 50° and less than about 90°, wherein the first sidewall angle differs from the second sidewall angle by about 20° or more.

**BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ **BLACK BORDERS**
- ☐ **IMAGE CUT OFF AT TOP, BOTTOM OR SIDES**
- ☐ **FADED TEXT OR DRAWING**
- ☐ **BLURRED OR ILLEGIBLE TEXT OR DRAWING**
- ☐ **SKEWED/SLANTED IMAGES**
- ☐ **COLOR OR BLACK AND WHITE PHOTOGRAPHS**
- ☐ **GRAY SCALE DOCUMENTS**
- ☒ **LINES OR MARKS ON ORIGINAL DOCUMENT**
- ☐ **REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY**
- ☐ **OTHER:** \_\_\_\_\_

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.**
